

PARTICIPATE IN  
RESEARCH ON

# FOCAL DYSTONIA

In the UCSF Biomagnetic Imaging Lab (BIL), we examine both **recordings of brain activity** and studies using **brain stimulation** in order to understand what happens in a variety of brain disorders including laryngeal dystonia (LD) and task-specific focal hand dystonia (tspFHD).

We are currently recruiting people who have been diagnosed with ***focal dystonia*** (either laryngeal dystonia or hand dystonia) for participation in our research studies.

If you are interested in participating, please contact either :

- \* Dr. Leighton Hinkley by email **[leighton.hinkley@ucsf.edu](mailto:leighton.hinkley@ucsf.edu)**
- \* The BIL by phone at **(415) 476-6888**.

Studies take place at both the UCSF Mission Bay Campus and the UCSF Parnassus Campus. You will be reimbursed for your time participating in the study.
